SUMMARY

Second-year BCA (Hons. with Research) student at Christ (Deemed to be University) who builds responsive browser apps in JavaScript, HTML5 and CSS3 and object-oriented programs in Java and C++. Intel Unnati AI/ML and Infosys Springboard certified. Seeking a software development internship.

SKILLS

Core: Java, JavaScript, HTML5, CSS3, Python, C++, OOP, Java Swing, JDBC, SQLite, DOM manipulation, responsive design, HTML5 Audio API

Familiar: Flask, Logistic Regression, scikit-learn, Pandas, NumPy, SQL, NLTK, NLP basics (tokenization, stemming, lemmatization, POS tagging, NER)

Tools: Git, GitHub, Maven, VS Code

EXPERIENCE

Web Development Intern, CodeAlpha | Remote *May 2026 – Aug 2026*

- Enabled users to find any of 50+ uploaded tracks in under 1 second by building BeatStream's track search with JavaScript filtering and dynamic DOM rendering.
- Delivered a layout that works on 3 screen sizes and 3 browsers by building responsive HTML5/CSS3 with media queries and flexbox.
- Eliminated invalid-date errors across 25+ test cases in Age Calculator by validating input in JavaScript and handling leap-year and future-date edge cases.
- Improved playback usability for 10 test users by adding custom controls (play, seek, volume) and a Dark/Light theme switch with the HTML5 Audio API.

Code: github.com/tejwanirishabh1/Music-Player | github.com/tejwanirishabh1/Age-Calculator

PROJECTS

SpendSphere | Java 21, Swing, SQLite, JDBC, Maven | Personal project *github.com/tejwanirishabh1/SpendSphere*

- Enabled users to stay within monthly and per-category budgets by building a Java Swing desktop app with a dashboard, category-wise and monthly spending charts, and budget-progress tracking.
- Persisted expense records across sessions and let users find any transaction by search, category or date by implementing SQLite storage through JDBC and a DAO layer.
- Kept the data layer reliable by writing test classes for the database and DAO layers (DatabaseTest, ExpenseDAOTest) and managing dependencies with Maven.

FinRisk AI | Python, Flask, scikit-learn, Pandas, SQLite | Team of 5 *github.com/Priyanshu-Lakra/loan-risk-ai-flask*

- Delivered instant High/Low loan default-risk decisions from 8 applicant inputs (income, loan amount, tenure, CIBIL score and more) by cleaning the dataset and training a Logistic Regression model in scikit-learn.
- Validated the model on a held-out 20% test split, reaching 84% accuracy, by evaluating it with scikit-learn.
- Extended the app into a web tool with EMI calculation, bank recommendation and user login by wiring Flask routes and the SQLite database.

Days Calculator | C++, OOP | Team of 5 *github.com/Priyanshu-Lakra/days-calculator-*

- Delivered correct day-number-to-date conversion and N-day date addition, including leap years and input validation, across 100+ test dates by implementing encapsulation with private variables and public getter/setter methods in C++ classes.

EDUCATION

Christ (Deemed to be University), Delhi NCR | BCA (Hons. with Research) *2025 – 2028*

Semester II SCGPA: 3.18 / 4.0

CERTIFICATIONS

Intel Unnati: Artificial Intelligence / AI-ML • Infosys Springboard: HTML • Infosys Springboard: C++ • Infosys Springboard: RPA Course Certification • SUNERGOS (January 2026): inter-university competition with participants from multiple universities; certificate issued by the college IT Team

LEADERSHIP & ACHIEVEMENTS

- Sports Club Leader, School of Sciences; School Prefect (Class XI) and Sports Captain (Class XII).
- Basketball: Pedagogic League runner-up (Years 1 and 2), Basketball Clusters runner-up, CRISPO winner.
